FLWR Token

Crypto-Asset Information Document

Issued by: flower-token.net | Network: Polygon Mainnet | Date: March 2026

1. Project Description

flower-token.net is a digital garden photography gallery. The Garden Flower Collection consists of 69 unique photographs taken between 2022 and 2024, each minted as an individual NFT (ERC-721) on Polygon Mainnet. Each photograph is unrepeatable — 1 of 1 — and is permanently recorded on the blockchain.

FLWR is the native utility token (ERC-20) of the flower-token.net ecosystem. Its purpose is to serve as the exchange unit within the platform for future collections, early access and additional ecosystem services.

2. Token Technical Data

Parameter	Value
Nombre / Name	`Flower Token`
Simbolo / Symbol	`FLWR`
Estandar / Standard	`ERC-20 (OpenZeppelin)`
Red / Network	`Polygon Mainnet`
Supply total	`69,000 FLWR`
Decimales / Decimals	`18`
Tasa / Tax per transfer	`2% -> treasury wallet`
Tasa maxima / Max tax	`10% (locked in contract)`
Contrato NFT / NFT Contract	`0x0f0e8B8dd16D274207929bA2081b8702bbE5d302`
Contrato FLWR / FLWR Contract	`0xF77e8cc30aEDe5f3163464036Db7215e4F42F934`
Emisor / Issuer	`0x2CbcBFFafD31de08BB4510B73F43eEf008B4bAf5`
DEX	`QuickSwap V3 - Polygon`
Verificacion / Verification	`Blockscout + Sourcify`

3. Token Utility

FLWR is a utility token whose use is restricted to the flower-token.net ecosystem. The intended functions are:

— Payment method for future NFT collections in the ecosystem.

— Early access to new collections before public launch.

— Exchange unit between community participants.

— Store of value within the ecosystem (not outside it).

Note: The Garden Flower Collection (69 NFTs) is sold out. FLWR is designed as a platform token for future collections, not as retroactive payment for already issued NFTs.

4. Supply Distribution

Destination	Amount	Percentage
Liquidity pool (QuickSwap)	4,745 FLWR	6.9%
Issuer reserve	64,255 FLWR	93.1%
Total	**69,000 FLWR**	**100%**

The issuer reserve will be progressively allocated to additional liquidity, holder rewards and contributor payments. No formal vesting schedule exists at this experimental stage.

5. Risk Factors

Total capital loss: With initial liquidity of ~50 EUR, value may be zero. No appreciation is guaranteed.

Reduced liquidity: The initial pool is small. Moderate-volume trades may move the price significantly.

No immediate utility: The current NFT collection is sold out. Utility depends on future collection development.

Technology risk: Contracts use audited OpenZeppelin libraries but have not been independently audited.

Regulatory risk: Crypto-asset regulation in Spain and the EU is still evolving.

6. Issuer Information

The issuer is an individual with experimental activity in software development and digital projects, based in Segovia, Spain. This project is not managed by any incorporated company. Contact: info@flower-token.net — flower-token.net
